

**Making Copies**

Copyies of objects can involve systematic and synchronisation

- Even if you've avoided a data race

```
void updateData (const std::vector<float>& newData)
{
    data = newData;
}
```

 **data could resize and allocate**

# Making Copies

- Copies of objects can involve system calls and synchronisation
- Even if you've avoided a data race

```
void updateData (const std::vector<float>& newData)
{
    data = newData;
}
```

 **data could resize and allocate**

# Hidden Copies

- Even moves can result in hidden costs
